Task Analysis

Task Analysis is the process of *breaking down a user's interactions* with a system into smaller, manageable steps to understand how users achieve their goals. It helps in identifying user needs, pain points, and areas for improvement.

Key Aspects of Task Analysis:

- Understanding what tasks users perform.
- Identifying the sequence of actions required to complete a task.
- Analyzing user pain points and inefficiencies.
- Defining requirements to improve the user experience.

User Flow

User Flow is a *visual representation* of how users navigate through an application to complete a specific goal. It shows the steps users take from the entry point to the final action.

Key Aspects of User Flow:

- Represents decision-making paths (e.g., what happens if a user cancels a form?).
- Maps different navigation possibilities (e.g., alternative ways to reach the goal).
- Shows how users move between screens.

User Flow for Electronics Buying App

Start → Open App → Browse/Search Electronics → View Product Details → Add to Cart → Checkout → Payment Authorization →

If Payment Successful:
Order Confirmed → Receive Order → Check Item → No Issue → Leave Review (Optional) → End

If Payment Failed:
Payment Failed → Update Payment → Checkout → Payment Authorization

If Item Has Issue:
Issue with Item → Contact Support → Return/Replacement Created → Return Label Provided → Item Returned → Refund/Replacement → End

Steps in the Task Flow

Step 1: Start

User opens the electronics buying application.

Step 2: Browse/Search Electronics

User searches or browses available electronic products.

Step 3: View Product Details

User checks product specifications, price, and reviews.

Step 4: Add to Cart

User selects the product and adds it to the shopping cart.

Step 5: Checkout

User proceeds to checkout to finalize the purchase.

Step 6: Payment Authorization

System verifies the payment.

- **If Payment Successful**
    - Order is confirmed.
- **If Payment Failed**
    - User updates payment information and retries.

Step 7: Order Confirmation

System confirms the order.

Step 8: Receive Order

User receives the product delivery.

Step 9: Check for Issues

User checks if the product has any issue.

- **If No Issue**
    - User may leave a review.
    - Process ends.
- **If Issue Exists**
    - User contacts support.

Step 10: Return/Replacement Process

Support creates return or replacement request.

Step 11: Return Label Provided

System provides a return shipping label.

Step 12: Item Returned

User sends the product back.

Step 13: Refund or Replacement

System processes refund or replacement.

Step 14: End

The process is completed.
