UID EX 9

NAME: ABIRAMI L ROLL NO: 240701010

AIM:

The aim is to design a student registration form that validates input fields such as name, age, password, and confirm password, and displays appropriate error messages using HTML, CSS, and JavaScript.

PROCEDURE:

Step 1:

Setting Up the HTML Form

Start by creating an HTML form with input fields for name, age, password, and confirm password.

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Student Registration Form</title>
    <style>
        body {
            font-family: Arial, sans-serif;
            background: linear-gradient(to right, #74ebd5, #ACB6E5);
            display: flex;
            justify-content: center;
            align-items: center;
            height: 100vh;
        }

        .container {
            background: white;
            padding: 25px;
            border-radius: 10px;
            box-shadow: 0 0 10px rgba(0,0,0,0.2);
            width: 300px;
        }

        h2 {
            text-align: center;
        }

        input {
            width: 100%;
            padding: 8px;
            margin: 8px 0;
            border-radius: 5px;
            border: 1px solid #ccc;
        }

        button {
            width: 100%;
            padding: 10px;
            background: #4CAF50;
            color: white;
            border: none;
            border-radius: 5px;
            cursor: pointer;
        }

        button:hover {
            background: #45a049;
        }

        .error {
            color: red;
            font-size: 12px;
        }

        .success {
            color: green;
            text-align: center;
            margin-top: 10px;
        }
    </style>
<link rel="stylesheet" href="style.css">
</head>
<script src="script.js"></script>
<body>

<div class="container">
```

```html
<div class="container">
    <h2>Registration Form</h2>

    <input type="text" id="name" placeholder="Enter Name">
    <div id="nameError" class="error"></div>

    <input type="number" id="age" placeholder="Enter Age">
    <div id="ageError" class="error"></div>

    <input type="password" id="password" placeholder="Enter Password">
    <div id="passError" class="error"></div>

    <input type="password" id="confirmPassword" placeholder="Confirm Password">
    <div id="confirmError" class="error"></div>

    <button onclick="validateForm()">Register</button>

    <div id="successMsg" class="success"></div>
</div>

<script>
function validateForm() {
    let name = document.getElementById("name").value;
    let age = document.getElementById("age").value;
    let password = document.getElementById("password").value;
    let confirmPassword = document.getElementById("confirmPassword").value;

    let valid = true;

    // Clear previous messages
    document.getElementById("nameError").innerText = "";
    document.getElementById("ageError").innerText = "";
```

```javascript
let age = document.getElementById("age").value;
let password = document.getElementById("password").value;
let confirmPassword = document.getElementById("confirmPassword").value;

let valid = true;

// Clear previous messages
document.getElementById("nameError").innerText = "";
document.getElementById("ageError").innerText = "";
document.getElementById("passError").innerText = "";
document.getElementById("confirmError").innerText = "";
document.getElementById("successMsg").innerText = "";

// Name validation
if (name.trim() === "") {
    document.getElementById("nameError").innerText = "Enter valid name";
    valid = false;
}

// Age validation
if (age === "" || age < 18) {
    document.getElementById("ageError").innerText = "Age must be 18+";
    valid = false;
}

// Password validation
if (password.length < 6) {
    document.getElementById("passError").innerText = "Password must be at least 6 characters";
    valid = false;
}
```

```
    // Password validation
    if (password.length < 6) {
        document.getElementById("passError").innerText = "Password must be at least 6 characters";
        valid = false;
    }

    // Confirm password validation
    if (password !== confirmPassword) {
        document.getElementById("confirmError").innerText = "Passwords do not match";
        valid = false;
    }

    // Success message
    if (valid) {
        document.getElementById("successMsg").innerText = "Registration Successful!";
    }
}
</script>

</body>
</html>
```

Step 2:

Styling the Form with CSS

Next, add some basic styling to make the form look neat and user-friendly.

```
body {
    font-family: Arial, sans-serif;
    background: linear-gradient(to right, #74ebd5, #ACB6E5);
    display: flex;
    justify-content: center;
    align-items: center;
    height: 100vh;
}

/* Form Container */
.container {
    background: #ffffff;
    padding: 25px;
    border-radius: 10px;
    width: 320px;
    box-shadow: 0 4px 12px rgba(0, 0, 0, 0.2);
}

/* Heading */
h2 {
    text-align: center;
    margin-bottom: 15px;
    color: #333;
}

/* Input Fields */
input {
    width: 100%;
    padding: 10px;
    margin: 8px 0;
    border-radius: 6px;
    border: 1px solid #ccc;
    font-size: 14px;
}
```

```
input:focus {
    border-color: #4CAF50;
    outline: none;
}

/* Button */
button {
    width: 100%;
    padding: 10px;
    background: #4CAF50;
    color: white;
    font-size: 16px;
    border: none;
    border-radius: 6px;
    cursor: pointer;
}

/* Button hover */
button:hover {
    background: #45a049;
}

/* Error message */
.error {
    color: red;
    font-size: 12px;
}

/* Success message */
.success {
    color: green;
    text-align: center;
    margin-top: 10px;
    font-weight: bold;
}
```

Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields and display error messages.

```
function validateForm() {
    let name = document.getElementById("name").value;
    let age = document.getElementById("age").value;
    let password = document.getElementById("password").value;
    let confirmPassword = document.getElementById("confirmPassword").value;

    let valid = true;

    // Clear previous messages
    document.getElementById("nameError").innerText = "";
    document.getElementById("ageError").innerText = "";
    document.getElementById("passError").innerText = "";
    document.getElementById("confirmError").innerText = "";
    document.getElementById("successMsg").innerText = "";

    // Name validation
    if (name.trim() === "") {
        document.getElementById("nameError").innerText = "Enter valid name";
        valid = false;
    }

    // Age validation
    if (age === "" || age < 18) {
        document.getElementById("ageError").innerText = "Age must be 18+";
        valid = false;
    }

    // Password validation
    if (password.length < 6) {
        document.getElementById("passError").innerText = "Password must be at least 6 characters";
        valid = false;
    }

    // Confirm password validation
```

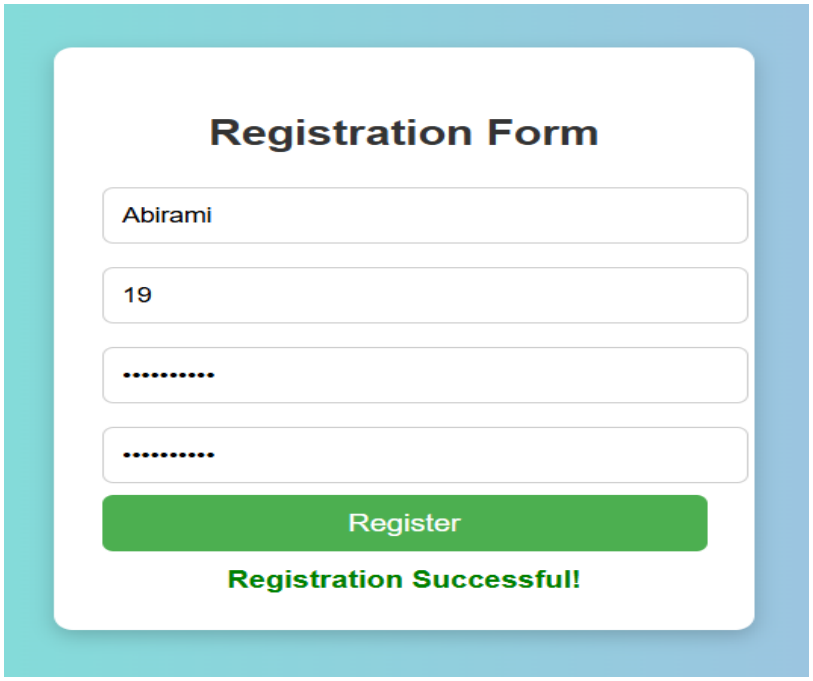
```
if (password.length < 6) {
    document.getElementById("passError").innerText = "Password must be at least 6 characters";
    valid = false;
}

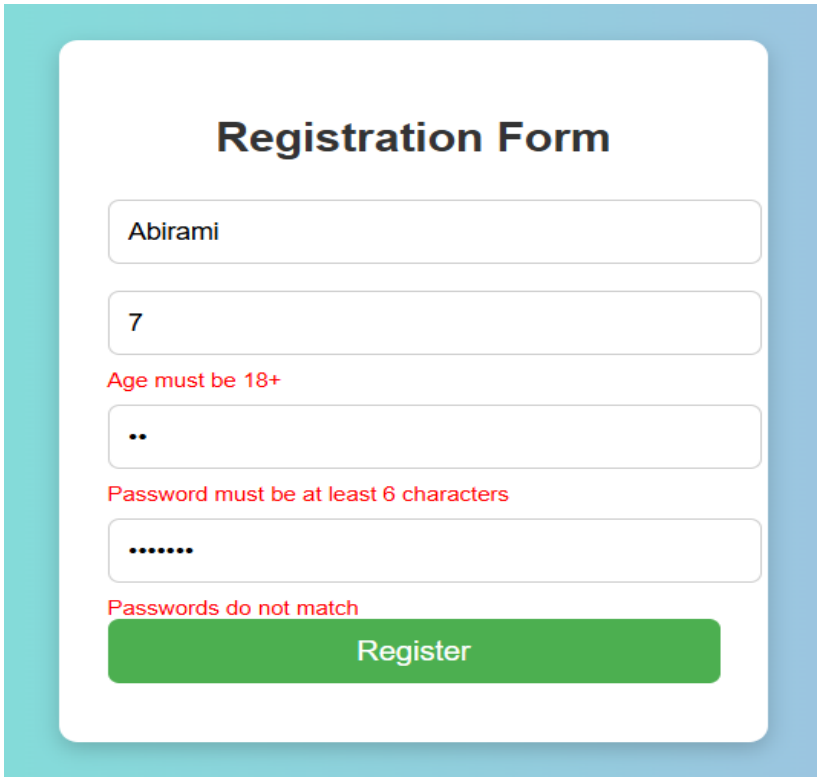
// Confirm password validation
if (password !== confirmPassword) {
    document.getElementById("confirmError").innerText = "Passwords do not match";
    valid = false;
}

// Success message
if (valid) {
    document.getElementById("successMsg").innerText = "Registration Successful!";
}
```

OUTPUT

For valid input:





Error message for invalid :
